

## WATER SUPPLY & WATER BOWLS

Bunnies need to drink lots of water every day. Volunteers who are assigned to ensure that the water supply is available and that the water bowls are clean must follow the steps below:

1. Empty the water bowl into a separate container, usually in the kitchen sink area
2. Wash the water bowl thoroughly with a mild detergent ensuring to remove any debris or residue from the previous water supply
3. Replenish the water supply with fresh water from the approved source, usually bottled water
4. Ensure that the area around the place where the water bowl sits is clean and dry.
5. Replace the water bowl in the bunny pen.

The bunnies and Katie are incredibly grateful for your help!
